

RAW SUGAR VHP TECHNICAL SPECIFICATION

1. DESCRIPTION

VHP (Very High Polarisation) Raw Sugar is vegetable origin , consisting primarily of sugarcane natural sucrose sweetener, Sugar obtained by direct manufacture in the Plants from sugar cane, after clarification of sugarcane juice by physical-chemical treatments, followed by evaporation, crystallization, centrifugation and drying. It is presented in the form of uniform solid Brown crystals.

2. COMPOSITION

Basic composition of VHP raw sugar is sucrose with a minimum concentration of 99.%,

3. TESTS

SENSORY ANALYSIS			
PARAMETERS	PATTERN		UNITY
	MIN	MAX	
Aspect	Proper	Proper	n.a
Color	Light Brown	Brown	
Smell	Proper	Proper	
Flavor	Characteristic sweet	Characteristic sweet	

PHYSICOCHEMICAL ANALYSIS
